Cysteine Assay Kit (ARG82032)

Cysteine is an essential component of antioxidant glutathione which protects cells from oxidative damage. This kit is ideal to assess redox balance and oxidative damage, as well as to predict the risk of cardiovascular diseases and metabolic syndromes.

Glycogen Branching Enzyme Assay Kit (ARG82031)

Glycogen branching enzyme (GBE) is an enzyme required for glycogen synthesis. It correlates with glycogen storage diseases. Besides, GBE1 is implicated in cancer progression and is being investigated as a potential therapeutic target in various cancers. This kit is the best solution to measure the activity of GBE as well as to screen and validate GBE1 blockers.

Polyphenol Oxidase Assay Kit (ARG82015)

Polyphenol oxidase (PPO) plays an important role in several biological processes in plants, including plant defense and postharvest browning. This kit is ideal to quantify PPO activity for understanding plant physiology as well as for developing strategies to control browning in food industry.

Glutaminase Assay Kit (ARG82767) Proline Assay Kit (ARG82030)

Glutaminase (GLS) catalyzes the conversion of glutamine to glutamate, which is a precursor for proline synthesis. Proline is involved in ROS scavenging and cell survival. Glutamine-proline axis is crucial for cancer metabolism, cell proliferation, and energy production. These two kits are ideal to facilitate the research of cancer progression, potentially guiding therapeutic strategies.

Mo-Inositol Assay Kit (ARG83432)

Myo-inositol acts as a secondary messenger for many processes such as insulin signaling, thyroid hormone synthesis, and lipid metabolism. It also presents anti-cancer properties in certain cancer cells. This kit is a convenient tool to quantify myo-inositol in diverse samples, supporting research related to metabolism, nutrition, and disease.
